2500 movement power storage time

Overview

Is the Omega caliber 2500 an in-house movement?

The Omega caliber 2500 is, at its core, an ETA movement, modified by ETA. It is originally born as the ETA 2892, and then modified to become the Omega Caliber 2500. So with that said, unlike what the name might suggest, it is not an in-house movement. But then again, what exactly is a truly in-house movement?

.

What is a 2500 chronometer?

This chronometer-certified movement boasts 27 jewels and a power reserve of 48 hours, ensuring reliable timekeeping for days on end. The 2500 is also fitted with a bi-directional winding rotor, allowing for convenient and efficient winding, as well as a quick-set date function for easy adjustments.

What frequency does a caliber 2500 use?

The Caliber 2500 was originally introduced to operate with a frequency of 28800 but was then changed to operate at the rather unusual 25,200 vibrations/hour, which Omega determined to be optimal. The rate was changed from generation C onwards. Reducing the frequency means less wear on parts and thus longer service intervals. Photo by Urdelar.se

2500 movement power storage time

[Seagull st25 movement info](#)

Thankyou Monkey_like_watch and Chascomm, some awesome info. It's so difficult to find out much about Chinese movements and I'm quite the fan- especially when it comes to Seagull. I would love to get a ...

How to tell which 2500 movement you have?

I think only the 2500C and 2500D were used in the SMP, versions A and B came earlier than the 2008 introduction date and were seen in the DeVille etc. I think the D is only seen post ~2012 so I would expect ...

2500C Power reserve/winding etc.. , Omega Watch Forums

First time I noticed this I was wearing it and it had lost 5 minutes, so I thought wearing it is not enough to power it, so fully wound and wore for a week. But I'll give that a go, ...
