# Air energy storage expander

## Overview

---

Electrical energy storage has been recognised as an underpinning technology to meet the challenges in the power network arisen from the rapidly increasing penetration of renewable energy. Compressed Air Energy Storage (CAES) is one of the most mature and reliable energy storage technologies.

Why is air expander important in a CAES system?

Air expander is one of the key components in a CAES system because its operational characteristics determine the power conversion efficiency and the power generation during the discharge period. The performance of the expander contributes heavily to the round trip efficiency of the whole system.

What is a 300 MW compressed air expander?

Compared with the 100-MW advanced CAES system, the 300-MW system will achieve a threefold amplification in scale, a reduction of 20%-30% in unit cost and an enhancement of 3-5% in overall efficiency. The development of the 300-MW compressed air expander stands as a milestone in the field of compressed air energy storage in China.

How does a compressed gas expander work?

The potential energy of the compressed gas is transferred to mechanical energy of the shaft. In the expander, the timings of opening and closing the intake and exhaust valves can be controlled. For example, the intake valve of the expander opens when air reaches sufficient pressure in the cylinder.

Who developed the energy storage expander?

This expander is independently developed by the Institute of Engineering Thermophysics (IET) of the Chinese Academy of Sciences and ZHONG-CHU-GUO-NENG (BEIJING) TECHNOLOGY CO., LTD. Energy storage technology serves as the key supporting technology for energy revolution.

What is CAES (compressed air energy storage)?

Recently, a major breakthrough has been made in the field of research and development of the Compressed Air Energy Storage (CAES) system in China,

which is the completion of integration test on the world-first 300MW expander of advanced CAES system marking the smooth transition from development to production.
