# Botswana enters energy storage sector

## Overview

---

Did you know Botswana's energy storage sector is growing faster than a cheetah chasing its morning coffee?

With global energy storage now a \$33 billion industry [1], Botswana is positioning itself as Africa's next hub for smart home energy solutions. This isn't just about storing power – it's about.

Did you know Botswana's energy storage sector is growing faster than a cheetah chasing its morning coffee?

With global energy storage now a \$33 billion industry [1], Botswana is positioning itself as Africa's next hub for smart home energy solutions. This isn't just about storing power – it's about.

The World Bank Group has approved plans to develop Botswana's first utility-scale battery energy storage system (BESS) with 50MW output and 200MWh storage capacity. The World Bank will support the 4-hour duration BESS via a loan of US\$88 million. It will also receive a US\$30 million loan and a US\$4.

The World Bank has provided Botswana, one of the world's fastest-growing economies, with a loan to finance a 50 MW/200 MWh battery energy storage system, the nation's biggest such project to date. Botswana has received an \$88 million loan from the World Bank for its first utility-scale battery.

The Botswana energy storage project is quietly becoming Africa's dark horse in the clean energy race. As of March 2025, this \$120 million initiative has already deployed enough battery capacity to power 15,000 homes during peak demand. Not bad for a project that started as scribbles on a napkin.

Botswana's energy policy is anchored on three key aspects - increasing access to electricity through the Rural Electrification Project, security, and stabilization of the power supply, and onboarding Independent Power Producers, especially within the Solar PV sector (BPC 2020). Can Botswana generate.
