# Can suspended ceilings store electricity

## Overview

---

Can a suspended ceiling grid be used as a lighting and power distribution system?

This article analyzes the new technology of low-voltage lighting and power distribution at 30 volts or less using the suspended ceiling grid as a lighting and power distribution system.

Can you install receptacles above a suspended ceiling?

"Suspended ceilings can sometimes contain hidden violations such as these power supply cords. The power supply cords are supplying power to a ceiling-mounted projector and its associated equipment, which are located a few ceiling tiles away from these receptacles. Installing receptacles above a suspended ceiling is not prohibited by the NEC.

Can power supply cords be hidden above a suspended ceiling?

However, leaving power supply cords permanently plugged in and hidden above the suspended ceiling is a violation of Sec. 400.12 (5). This rule prohibits flexible cables, flexible cord sets, and power supply cords from being concealed in walls, floors, or ceilings — and also prohibits them from being located above a suspended or dropped ceiling.

What are suspended ceilings and why are they important?

Suspended ceilings are also essential when it comes to hiding a range of important office features, including air conditioning and wiring for systems like lighting, security and more. Thanks to their clean design, they can hide a variety of different systems and help to prevent an untidy working atmosphere.

Are receptacles allowed above a hung ceiling?

From what I remember a while back, receptacles are allowed above a hung ceiling and in particular a receptacle above a hung ceiling is OK for a ceiling

mounted projector. I'm reading an article from EC&M about "The best of the worst: 2019's most interesting what's wrong here photos" and one of the slides is on receptacles above hung ceiling.

Can flexible cables be installed above a suspended ceiling?

The exception for Sec. 400.12 (5) permits flexible cables and cords to be installed above this suspended ceiling where they are installed in an enclosure specifically designed to be installed in plenum-type suspended ceilings, as permitted by Sec. 300.22 (C) (3)."
