# Capital energy storage plant operation

## Overview

---

When will Mitsubishi HC capital energy build a battery storage plant?

Construction of the facility is expected to begin in April 2025. Commercial operations are expected to start in January 2027. The battery storage power plant to be built in Kamiosatsu is Mitsubishi HC Capital Energy's first grid-scale battery project.

How is energy stored in a PSH plant?

To store energy, water is pumped from the lower reservoir to the upper reservoir during low net electricity demand or when energy supply exceeds demand. Most PSH plants use reversible pumps/turbines; however, some designs use separate pumps and turbines. PSH facilities can operate as open-loop or closed-loop systems.

How many energy storage plants are there in the United States?

Since then, numerous projects have been developed in the United States, with a total of 43 plants and a total installed capacity of 21.9 GW currently in operation . In 2019, this capacity represented approximately 93% of U.S. utility-scale energy storage power capacity and approximately 99% of U.S. energy storage capability .

When will Mitsubishi HC capital energy start commercial operations?

The battery storage power plant majority-owned by Mitsubishi HC Capital Energy is expected to start commercial operations in 2027. (Image: Mitsubishi HC Capital Energy).

What is Mitsubishi HC capital energy & Samsung?

Mitsubishi HC Capital Energy will be responsible for the project development and management while Samsung will be responsible for engineering. According to the statement, Mitsubishi HC Capital Energy plans to outsource the operation of the batteries and power trading on the capacity, wholesale,

and balancing markets to Osaka Gas.
