# **Domestic energy storage project bidding statistics**

## Overview

---

This led to an acceleration of domestic energy storage bidding projects since March. According to statistics from the energy storage and power market, the bidding capacity of domestic electrochemical energy storage amounted to approximately 27 GWh from January to May 2023, with the domestic.

This led to an acceleration of domestic energy storage bidding projects since March. According to statistics from the energy storage and power market, the bidding capacity of domestic electrochemical energy storage amounted to approximately 27 GWh from January to May 2023, with the domestic.

According to partial statistics, a total of 29 domestic electrochemical energy storage projects were opened for bidding in June 2023, with a combined capacity of 13.73GWh. This represents a significant month-on-month increase of 125.08%. From January to June 2023, the total bidding capacity for.

(1) Volume and price analysis of bidding and winning data: In 2023Q2, domestic energy storage bidding completed 6.5GW/14.2GWh, and the average price in June dropped to 1.16 RMB/GWh. In 2023Q2, the domestic energy storage bidding volume completed was 6.5GW/14.2GWh, +165%/+191% year-on-year. Among.

Based on partial statistics, there were 26 new energy storage bidding projects in June, with a combined capacity of 7.98GWh. Among them, framework. The share of renewable energy in the EU's electricity system is expected to reach 69% by 2030, according to the European Commission. As the share of.

Pumped hydro accounted for less than 70% for the first time, and the cumulative installed capacity of new energy storage [i.e. non-pumped hydro ES] exceeded 20GW. According to incomplete statistics from CNESA DataLink Global Energy Storage Database, by the end of June 2023, the cumulative installed.

Domestic large-scale energy storage: As of this week, the bidding volume for energy storage projects in August has reached 57.8% and 69.1% of the totals in July. The average price for energy storage systems in August is 1.37

yuan/Wh, with prices ranging between 0.92 and 2.33 yuan/Wh. The majority.

At the end of 2023, the winning data of energy storage bidding was weak, forming a poor expectation of demand in 2024. It takes 2 months for energy storage projects to confirm the winning bidder from bidding and 3 months from winning the bid to construction. According to time estimation of time. How a domestic energy storage system compared to last year?

In the first half of the year, the capacity of domestic energy storage system which completed procurement process was nearly 34GWh, and the average bid price decreased by 14% compared with last year. In the first half of 2023, a total of 466 procurement information released by 276 enterprises were followed.

What is the cumulative installed capacity of energy storage projects?

The cumulative installed capacity of new energy storage projects is 21.1GW/44.6GWh, and the power and energy scale have increased by more than 225% year-on-year. Figure 1: Cumulative installed capacity (MW%) of electric energy storage projects commissioned in China (as of the end of June 2023).

How big is China's energy storage capacity?

According to incomplete statistics from CNESA DataLink Global Energy Storage Database, by the end of June 2023, the cumulative installed capacity of electrical energy storage projects commissioned in China was 70.2GW, with a year-on-year increase of 44%.
