Energy storage and environmental protection phone

Overview

Are new energy storage systems safe?

Interest in storage safety considerations is substantially increasing, yet newer system designs can be quite different than prior versions in terms of risk mitigation. An uncontrolled release of energy is an inevitable and dangerous possibility with storing energy in any form.

Are battery energy storage systems visible from a property line?

Battery energy storage systems may or may not be visible from a facility's property line. Grid batteries can be housed in a variety of enclosures or buildings, none of which are taller than a house. Energy storage facilities are often unmanned and do not need light to function.

What is an energy storage system?

Energy storage systems are typically defined as either AC or DC coupled systems. This is simply the point of connection for the energy storage system in relation to the electrical grid or other equipment. For AC (alternating current) coupled systems, the batteries are connected to the part of the grid that has AC or alternating current.

Where are battery energy storage systems deployed?

Battery energy storage systems are currently deployed and operational in all environments and settings across the United States, from the freezing temperatures of Alaska to the deserts of Arizona.

Are energy storage systems dangerous?

In general, energy that is stored has the potential for release in an uncontrolled manner, potentially endangering equipment, the environment, or people. All energy storage systems have hazards. Some hazards are easily mitigated to reduce risk, and others require more dedicated planning and execution to maintain safety.

What is EPRI's energy storage safety research?

EPRI's energy storage safety research is focused in three areas, or future states, defined in the Energy Storage Roadmap: Vision for 2025. Establishing safety practices includes codes, standards, and best practices for integration and operation of energy storage support the safety of all. Gaps to this future state include:
