Energy storage fire fighting system

Overview

Can battery energy storage systems cause a fire?

Fire suppression strategies of battery energy storage systems In the BESS systems, a large amount of flammable gas and electrolyte are released and ignited after safety venting, which could cause a large-scale fire accident.

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation – Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Are lithium-ion battery energy storage systems fire safe?

With the advantages of high energy density, short response time and low economic cost, utility-scale lithium-ion battery energy storage systems are built and installed around the world. However, due to the thermal runaway characteristics of lithium-ion batteries, much more attention is attracted to the fire safety of battery energy storage systems.

How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations . Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression .

Why is safety important for the LFP battery energy storage industry?

A BESS made of LFP batteries exploded and caught fire in China, and several firefighters suffered death and mutilation in the blast in 2021 . Therefore, safety is crucial for the high-quality development of the LFP battery energy storage industry. Fig. 2.

What happens if an energy storage station fires?

Since a large amount of energy is stored in the energy storage station in the form of chemical energy, once this energy is released in the form of heat and fire, it will cause serious damage. For example, in 2024, three LFP battery energy storage station fire accidents occurred in Germany within three months .
