Energy storage orders continue to be hot

Overview

If the energy storage industry had a holiday season, it'd be Q1 2025. Just 45 days into the year, global storage orders have already surpassed 100 GWh - that's enough to power 10 million homes for a day [10]. From Tesla's Shanghai Megapack factory humming like a caffeinated bumblebee [7] to Chinese.

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger utility-scale projects. Since 2024.

While excess production capacity and a shrinking overseas demand for energy storage pose challenges, 11 leading companies have defied the odds. In the first 11 months of this year, they secured overseas orders totaling nearly 250GWh. Some companies have consistently clinched substantial deals.

Trump's dampening effect on US investor sentiment could lead to a flight to quality while tariffs will cause a surge in orders this year, writes Tao Kong, managing partner of developer Luminous Energy. Kong will be speaking at the Energy Storage Summit USA 2025, which kicks off tomorrow in Dallas. Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

What is the future of energy storage?

Global installed energy storage is on a steep upward trajectory. From just under 0.5 terawatts (TW) in 2024, total capacity is expected to rise ninefold to over 4 TW by 2040, driven by battery energy storage systems (BESS). Last year saw a record-breaking 200 gigawatt-hours (GWh) of new BESS projects coming online, a growth rate of 80%.

Should energy storage be removed from energy grid connection?

For energy storage, the new Chinese policy emphasized the need to remove energy storage as a prerequisite for renewable energy project grid connection, a requirement that has been a major driver for battery build. Nonetheless, BNEF still expects strong demand for batteries, as the policy doesn't explicitly require mandates to stop.
