Energy storage power eu product label image

Overview

Why are energy labels important?

Energy labels are used to help consumers choose products that save energy. The Energy Labelling Directive 2010/30/EU extended the energy labelling to energy-related products in the commercial and industrial sectors, for example cold storage rooms and vending machines.

What is the new energy Labelling Regulation (EU) 2017/1369?

Regulation (EU) 2017/1369 sets a new framework for energy labelling. It replaced the energy label directive 2010/30/EU and came into force on 1 August 2017. EPREL - the EU Product Register for Energy Labelling. The registration is mandatory per 1 January 2019. The legislation applies to all 'energy-related products'.

Do energy-related products need to be registered in eprel?

Before energy-related products covered by energy labelling are placed on the EU market, the models must be registered by their supplier in the product database EPREL. As a supplier what should you do to comply with the Ecodesign and the Energy Label legislative framework?

Which appliances need energy labels?

Energy labels are already mandatory for air conditioners, dishwashers, domestic ovens, fridges and freezers, lamps and luminaires, professional refrigerated storage cabinets, range hoods, solid fuel boilers, space heaters, televisions, tumble driers, vacuum cleaners, ventilation units, washing machines, water heaters and even tyres.

Do you need an energy label?

From January 2019, suppliers (manufacturers, importers or authorised

representatives) need to register their appliances, which require an energy label in the European Product Database for Energy Labelling (EPREL), before selling them on the European market.

When do suppliers have to enter data on energy consumption?

Starting at 1 January 2019 suppliers are obligated to enter the necessary data on energy consumption into the EPREL-database for each product it places on the market. For products already on the Union-market, from 1 August 2017, a transitional regime applies; for these products the database must be filled in by 30 June 2019 at the latest.
