Shell Energy can be your guide, making it easier to manage day-to-day energy needs while increasing efficiency, managing cost, and addressing your decarbonization goals. Together, we can build a better energy future. In a complex market, we keep things simple, providing the power you need at a.

We help make the global energy system work for you, providing the end-to-end power solutions you need to improve efficiency, manage costs, and respond to changing energy demands. As of June 2024, Shell Energy had more than 15 GW power generation under management coming from plants across North.

Electricity is the fastest-growing part of the energy system. To accelerate the transition to net-zero emissions, power is playing an increasingly important role and is being delivered to customers from conventional power plants, renewable energy developments and battery storage assets through a. What does shell energy do?

From generation and transmission to transportation and storage, Shell Energy offers the end-to-end wholesale power solutions, utilities, generators, municipalities, and community choice aggregators need. In a complex market we keep things simple, providing the power you need at a competitive price to help you meet your business goals.

How many GW of power does Shell Energy have?

As of June 2024, Shell Energy had more than 15 GW power generation under management coming from plants across North America, you can get the power you need with our competitively-priced power supply.

What does shell energy do in Europe?

In Europe, Shell Energy is involved across all areas of the energy system, from renewable power generation to gas and power trading and supplying businesses. Electricity is the fastest-growing part of the energy system.

How does Shell Energy support the energy transition?

Within Europe, Shell Energy plays an important role to support businesses through the energy transition via its integrated energy solutions. We support the EU's green transition plan, REPowerEU, which is aimed at spurring investment in renewable energy, delivering energy efficiency, producing cleaner energy and diversifying energy supplies.

How can shell make the best use of renewable power?

Together, we will make the best use of renewable power. Our power technology organisation is developing and deploying innovative power technologies alongside four key areas: Shell is developing renewable power generation capacity to decarbonise our assets and to enable the production of low-carbon molecules.

Why is shell developing renewable power generation capacity?

Shell is developing renewable power generation capacity to decarbonise our assets and to enable the production of low-carbon molecules. Our research and product development work aims to make renewable power cheaper, and available around-the-clock.
