The electrical energy sector faces a growing shortage of skilled tech workers needed to repair and maintain America's aging infrastructure, such as vulnerable and deteriorating power grids, decades-old control systems and outdated distribution networks. With as many as 33% of knowledgeable power.

At Peak Demand, our energy storage recruiters understand the unique challenges of this rapidly growing industry. The demand for skilled professionals in energy storage is booming, often outpacing the available talent pool. This industry requires a specialized blend of expertise, including knowledge. What makes field a great energy storage company?

The energy storage industry is no exception. At Field, they are the glue that holds us together - whether that's by bringing new talent into the business, negotiating contracts or ensuring we have a strong balance sheet. They're absolutely essential to the Field business, enabling us to do the work we do.

Why do energy storage companies need a strong finance team?

Regardless of which sector they're working in, businesses need strong finance, legal and people teams. The energy storage industry is no exception. At Field, they are the glue that holds us together - whether that's by bringing new talent into the business, negotiating contracts or ensuring we have a strong balance sheet.

How can we solve the energy sector's talent crisis?

One solution to the energy sector's growing talent crisis is to actively preserve and pass down the expertise of the seasoned workers who have kept our power systems running for decades.

What makes the energy storage industry so interesting?

The energy storage industry is still fairly young compared to others like wind or solar. This means it's rapidly growing, changing and innovating (part of what makes working in the industry so interesting).

What role does technology play in energy storage?

Technology has a very important role to play in energy storage and has been instrumental in getting the industry to where it is now. That said, we're still learning and solving complex problems each day. This means the industry needs software developers and data scientists, along with machine learning and optimisation experts.

Why should the energy industry invest in technology?

By investing in the people who maintain, modernize and secure our energy systems, the industry can not only grow its tech workforce but also build a smarter, more resilient infrastructure that is prepared to meet the demands of the future.
