Energy storage project introduction ppt presentation

Overview

What is energy storage?

- Large scale systems, stored as gravitational energy in hydraulic systems, thermal energy, chemical energy in batteries or compressed air. NEED FOR ENERGY STORAGE
- Energy storage has many benefits.

What is the function of energy storage system?

Function of energy storage system Background of storage system Storage is an essential unit that stores unstable electric energy during wind and photovoltaic power generation, which is sharply growing new renewable energy, and supplies the unstable energy to electric power system again in necessary moment.

Why is energy storage important?

NEED FOR ENERGY STORAGE • Energy storage has many benefits. It is particularly important for the development and integration of renewable energy technologies • Some renewable energy sources have intermittent generation, which means that electricity is only produced when the sun is shining or when the wind is blowing.

How does a superconducting magnetic energy storage system work?

Superconducting magnetic energy storage systems(SMESS) store electricity in the magnetic field through a large current circulating in a superconducting coil. Current studies focus on reducing the cost of coils and temperature control system.

What are the critical materials needed for energy storage technologies?

Critical materials needed for storage technologies (such as Li, Co) Cost, performance of energy storage concepts technically feasible but not yet economically viable Validation, verification of technology to be introduced into marketplace Policy and regulatory barriers CMI, REMADE work in materials

reduction, elimination, substitution, recovery.

What are the two types of energy storage?

Two types are, 1. Storage Methods for Use with Portable Electronic Devices. 2. Energy Use and Storage in Vehicles Types Based on Energy Type: Electrical, Mechanical, Chemical and Thermal Types Based on the applications: Low power applications in remote areas, • Mainly to supply transducers and emergency terminals.
