Energy storage tank is waterproof and anti-corrosion

Overview

What is electro-chemical storage tank corrosion protection?

Electro-chemical storage tank corrosion protection is the only effective method against the most local types of metal corrosion (pitting and gap corrosion, contact corrosion, intergranular corrosion and cracking).

Is your storage tank's interior coating protecting it from corrosion?

The interior coating of a storage tank is trusted to protect not only the storage vessel, but also the product being stored from corrosion. Without a doubt, corrosion is the principal enemy of a storage vessel. You might not give thought to what is happening on the inside of a tank because you trust the interior coating to do its job.

What is corrosion protection of a steel fuel storage tank?

Corrosion protection of a steel fuel storage tank not only involves the protection of the outside of the tank to atmospheric corrosion but the corrosion protection from fuel being stored in the tank. The concern is small particulates that may form in the diesel fuel due to the interaction between the zinc and fuel occurring within the tank.

How to protect a storage tank from corrosion?

Anodic protection should be provided for the storage tanks to minimize the corrosion of the shell. Periodic thickness measurements of a tank's shell and roof should be carried out to ascertain whether the tank is fit for service.

Do corrosion protection companies work with the outside surface of the tank?

When the corrosion protection companies work with the outside surface of the tank bottom they should meet the following requirements: It is not necessary to apply protective coating on the outside surface of the tank when a hydrophobic sand-bitumen layer is arranged (at the rate of 1:9 in the mass density).

How microbial strains can be used to reduce tank corrosion?

Biological Desulfurization Technology Sulfur element in storage medium (e.g. crude oil) in storage tank is one of the important reasons for tank corrosion. Therefore, microbial strains can be used to reduce sulfur content in storage medium in order to reduce tank corrosion.
