The Enterprise Solar Storage Project, as proposed by Enterprise Solar Storage, LLC, is for the construction and operation of a photovoltaic (PV) solar facility and associated infrastructure necessary to generate 600 megawatts (MW) of renewable electrical energy with up to 4,000 megawatt-hours (MWh).

The Advancing Contracting in Energy Storage (ACES) Working Group was formed in 2018 to document existing energy storage expertise and best practices to improve project development and financing efforts across the energy storage industry. Through this combined effort, the ACES Working Group. What is the best practice guide for energy storage projects?

This Best Practice Guide covers eight key aspect areas of an energy storage project proposal. This Guide documents the industry expertise of leading firms, covering the different project components to help reduce the internal cost of project development and financing for both project developers and investors.

What are energy storage specific project requirements?

Project Specific Requirements: Elements for developing energy storage specific project requirements include ownership of the storage asset, energy storage system (ESS) performance, communication and control system requirements, site requirements and availability, local constraints, and safety requirements.

How do I deploy an energy storage system?

There are many things that must be considered to successfully deploy an energy storage system. These include: Storage Technology Implications Balance-of-Plant Grid integration Communications and Control Storage Installation The following sections are excerpts from the ESIC Energy Storage Implementation Guide which is free to the public.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

How can energy storage products be integrated?

Integration of energy storage products begins at the cell level and manufacturers have adopted different approaches toward modular design of internal systems, all with the goal of improving manufacturing efficiencies, reducing maintenance time and improving operational reliability.

What is the advancing contracting in Energy Storage Working Group?

The Advancing Contracting in Energy Storage (ACES) Working Group is an independent industry led and funded effort founded to develop a best practice guide for the energy storage project development community.
