Gas energy storage english

Overview

Why is gas storage important?

Learn more about gas through our downloadable ebook! Gas storage plays a key role in energy supply stability. It primarily acts as a buffer to meet increased demand during the winter heating season. During the summer months when gas demand is low, storage facilities are filled.

How does gas storage work?

This surplus gas is then readily available when demand rises during the colder months, helping stabilize prices and ensuring reliable energy supply. Various gas storage methods exist, including underground reservoirs in aquifers or salt caves, as well as Liquefied Natural Gas (LNG) and compressed gas.

When does the EU gas storage regulation come into force?

The regulation will enter into force the day after its publication in the EU's Official Journal. The gas storage regulation was adopted in June 2022, at the heart of the energy crisis, to ensure sufficient storage levels crucial to supply EU homes and businesses throughout winter and improve Europe's energy security.

What are the different types of gas storage methods?

Various gas storage methods exist, including underground reservoirs in aquifers or salt caves, as well as Liquefied Natural Gas (LNG) and compressed gas. These storage techniques bring flexibility and resilience to the gas supply system, ensuring that consumers have access to gas even during periods of high demand and unexpected supply disruptions.

Why is the EU extending its gas supply?

With these provisions set to expire at the end of 2025, the extension ensures that the EU will maintain a high level of security of supply while taking into account global gas market challenges. Gas storage facilities account for

around 30% of the EU's gas consumption during the winter months.

What are the changes to the gas storage regulation?

Today, the Council adopted proposed changes to the gas storage regulation, extending the current requirement for member states to maintain sufficient gas reserves before the winter season by an additional two years.
