Gravity energy storage light

Overview

GravityLight is a small gravity-powered light that operates by manually lifting a bag of rocks or sand up and then letting it fall by itself to generate energy.

Overview A gravity battery is a type of device that stores —the E given to an object with a mass m when it is raised against the force of (g , 9.8 m/s^2) into a height difference h .

An old and simple application is the driven by a weight, which at 1 kg and 1 m travel can store nearly $10 \text{ newton-meters [Nm]}$, joules [J] or watt-seconds [Ws], thus $1/3600$ of a watt-hour [Wh], while a typi.

The earliest form of a device that used gravity to power mechanical movement was the , invented in 1656 by . The clock was powered by the force of gravity using an mechanism.
