Greek pumped storage project construction

Overview

locations "Aghios Georgios" (maximum absorbable power of 496 MW and maximum deliverable power of 460 MW) and "Pyrgos" (maximum absorbable power of 234 MW and maximum deliverable power of 220 MW) and accompanying works, in the Municipalities of Amfi t of Common European Interest (PCI 2.9, formerly).

locations "Aghios Georgios" (maximum absorbable power of 496 MW and maximum deliverable power of 460 MW) and "Pyrgos" (maximum absorbable power of 234 MW and maximum deliverable power of 220 MW) and accompanying works, in the Municipalities of Amfi t of Common European Interest (PCI 2.9, formerly).

Among these projects is the groundbreaking pumped storage hydropower (PSH) project in Amfilochia. At a development cost of more than €600 million, it is the largest investment in energy storage in the country to date. For more than 20 years, TERNA ENERGY has played a leading role in clean energy.

The project "Hydro Pumped Storage in Amfilochia" is the largest investment in energy storage in Greece. With a total installed capacity of 680 MW (production) and 730 MW (pumping), the project consists of two independent upper reservoirs (Aghios Georgios and Pyrgos) and a common lower reservoir.

The Greek company TERNA S.A., construction branch of GEKTERNA Group, awarded the international technology group ANDRITZ a contract for the supply of electromechanical equipment for the new Amfilochia Pumped Storage Complex in the Central Greece region. It is the largest grid energy storage.

The project " Hydro Pumped Storage Complex in Amfilochia " is the largest investment in energy storage in Greece. It is characterized as a Project of Common Interest, under the code name PCI 2.9, since October 2013 and a Strategic Investment, since 2014. The technical studies were co-financed by.

Austria-based Andritz Group said it would design, manufacture and install six reversible pump-turbine generators for Greek company Terna within its Amfilochia pumped storage hydropower project. The complex is set to consist

of two plants with separate upper reservoirs. In its energy transition.

Set in the Municipality of Amfilochia, the project centers on a sophisticated pumped storage system, comprising: A shared lower reservoir, the existing artificial lake of Kastraki. This system allows energy to be hydraulically stored during periods of low demand or renewable overproduction, with. Does Greece need energy storage?

In its energy transition, Greece relies substantially on energy storage projects. While pioneering auctions for subsidies for battery systems on the European level, the country is also preparing some major pumped storage hydropower projects. The largest one, Amfilochia, is under construction and should be completed by the end of 2025.

How is Greece preparing for energy transition?

The complex is set to consist of two plants with separate upper reservoirs. In its energy transition, Greece relies substantially on energy storage projects. While pioneering auctions for subsidies for battery systems on the European level, the country is also preparing some major pumped storage hydropower projects.

Is Amfilochia a pumped storage hydro project?

Amfilochia is the first project in decades, but we are now planning many more to build on its success. We hope to start another new pumped storage project in the next two years, and we currently have another large hydropower project in development. How do you see pumped storage hydro in terms of the clean energy transition for Greece?

Will pumped storage plant be a green battery?

The advanced pumped storage plant will act as a green battery by balancing fluctuations in power generation from wind and solar plants, thus ensuring the secure and stable operation of the Greek power grid, it said. Water is pumped to the upper reservoir using excess electricity, when production exceeds demand.
