## Overview

---

Haiti faces significant challenges in generating and distributing energy reliably, and lack of access to affordable and reliable power significantly hinders investment and.

EDH's inability to provide reliable, centrally-supplied power continues to drive demand for power equipment, such as new electrical power systems, generators.

Haiti's relatively underdeveloped electricity grid means it can integrate renewable energy into its energy supply. According to the World Watch Institute study in 2014, Lake.

Why are electricity rates so high in Haiti?

Electricity rates in Haiti are higher than the average in the region due to EDH's inability to provide reliable, centrally-supplied power. This lack of reliable power continues to drive demand for alternative power solutions, such as new electrical power systems, generators, inverters, solar panels, and batteries, as well as their maintenance.

What challenges does Haiti face in generating and distributing electricity?

Haiti faces significant challenges in generating and distributing electricity reliably. The lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels.

What is the solar power plant capacity in Haiti?

The solar power plant in Haiti has a capacity of 1.2 MWp. It is located in the Commune of Jacmel, South-East Department, and is connected to the regional electricity network of Jacmel.

Can solar energy be used effectively in Haiti?

Solar energy can be used effectively in Haiti, offering energy self-sufficiency to the most isolated cities in the absence of a power grid. The country's location

in the tropics gives it very strong solar energy potential. It is believed that solar energy will play a fundamental role in access to electricity over the next 10 to 15 years.

What are Haiti's potential power generating sites?

The Haitian government prioritizes the procurement of fuel to reliably supply turbines. There are plans for 10MW facilities in Port-de-Paix and Jacmel and a 5MW array in Jeremie. Grand'Anse and Nippes Departments in the southern region were also targeted for smaller power generating facilities.

How much power does Haiti have reliably?

Haiti has an installed capacity of 250 to 400 Megawatts (MW) but only 60 percent of it is reliable. Many generation units and grid elements need rehabilitation and repair work. The distribution network has not been rehabilitated for more than 40 years.
