## Overview

While short-duration energy storage (SDES) systems can discharge energy for up to 10 hours, long-duration energy storage (LDES) systems are capable of discharging energy for 10 hours or longer at their rated power output. Both are needed to balance renewable resources and usage requirements hourly.

What is energy storage duration?

When we talk about energy storage duration, we're referring to the time it takes to charge or discharge a unit at maximum power. Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe.

Can energy storage be used for a long duration?

If the grid has a very high load for eight hours and the storage only has a 6-hour duration, the storage system cannot be at full capacity for eight hours. So, its ELCC and its contribution will only be a fraction of its rated power capacity. An energy storage system capable of serving long durations could be used for short durations, too.

How long can a battery energy storage system deliver?

How long the battery energy storage systems (BESS) can deliver, however, often depends on how it's being used. A new released by the U.S. Energy Information Administration indicates that approximately 60 percent of

installed and operational BESS capacity is being exerted on grid services.

What is storage duration?

Storage duration is the amount of time storage can discharge at its power capacity before depleting its energy capacity. For example, a battery with 1 MW of power capacity and 4 MWh of usable energy capacity will have a storage duration of four hours.

How long does a battery storage system last?

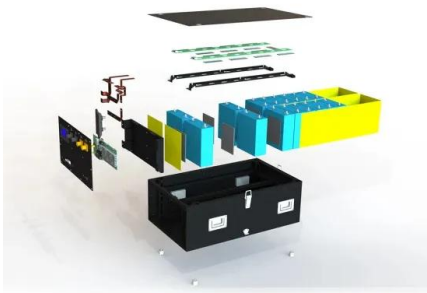

For example, a battery with 1 MW of power capacity and 4 MWh of usable energy capacity will have a storage duration of four hours. Cycle life/lifetime is the amount of time or cycles a battery storage system can provide regular charging and discharging before failure or significant degradation.

How long does a solar energy storage system last?

An SDES with a duration of 4-6 hours in a home may be used to keep the lights on or the refrigerator cold during an outage. On a broader scale, utility-sized SDES systems may be used to replace wind power on a day with no wind. Different battery chemicals affect the energy storage duration achieved.
