LPW48V100H
48.0V or 51.2V

Overview

How long is a Rolex 3135 power reserve?

The Rolex caliber 3135 has a power reserve of approximately 48 hours. The power reserve time varies depending on how you use it. The 3135 was originally launched as Rolex's first high-beat movement, as it increased the balance speed from 19,800 BPH to 28,800 BPH. Today, the 28,800 BPH has become standard across Rolex's collection of calibers.

How does a Rolex 3135 work?

The Caliber 3135 is a self-winding (automatic) movement, which means that it is powered by the rotor inside which spins when the watch is subject to movement (such as when wearing the watch). Rolex calls all its automatic movements perpetual. The two gears that allow the mainspring to be wound in either direction are coated in PTFE (Teflon).

How many parts does a Caliber 3135 have?

This means the caliber 3135 consists of closer to 200 parts. The parts that the Caliber 3135 consists of are: Screw for: balance guard, balance bridge, winding bridge, automatic device upper bridge, barrel bridge, train wheel bridge (same screw applies for all these areas).

Which Sea-Dweller models use a 3135?

The movement is installed in the models Datejust, Submariner Date, Yacht-Master and in the former model Sea-Dweller 4000, which was produced between 1988 and 2008. The successor Sea-Dweller Deepsea of 2008 also uses a 3135, but with new Parachrom blue hair spring .
