The lead-acid (PbA) battery was invented by Gaston Planté more than 160 years ago and it was the first ever rechargeable battery. In the charged state, the positive electrode is lead dioxide (PbO₂) and the negative electrode is metallic lead (Pb); upon discharge in the sulfuric acid electrolyte.

The lead-carbon battery is an improved lead-acid battery that incorporates carbon into the negative plate. It compensates for the drawback of lead-acid batteries' inability to handle instantaneous high current charging, and it has the benefits of high safety, high-cost performance, and sustainable.
