Load switch energy storage method

Overview

What is a load switch?

Extend battery life by reducing standby leakage current. Turn off unused subsystems w/load switches: WiFi/BT, LCD, SD Card Simplify power sequencing by implementing point of load control with load switches. Power on/off each rail with GPIO.

What is a static transfer switch (STS)?

Introduction The Static Transfer Switch (STS) plays a vital role in modern power systems, particularly in energy storage, data centers, and industrial power supply sectors. Its primary function is to ensure the seamless and rapid switching between different power sources to maintain uninterrupted power supply.

What is Energy Storage System (STS)?

In energy storage systems, STS is commonly used in conjunction with renewable energy sources such as Battery Energy Storage Systems (BESS) and photovoltaic/wind power to address the intermittency of renewable energy generation and to implement "peak shaving and valley filling" strategies for cost reduction. 2.

What is a magnetically suspended flywheel energy storage system (MS-fess)?

The magnetically suspended flywheel energy storage system (MS-FESS) is an energy storage equipment that accomplishes the bidirectional transfer between electric energy and kinetic energy, and it is widely used as the power conversion unit in the uninterrupted power supply (UPS) system.

What is a normal switch strategy?

For the normal switch strategy, the oscillation value of the DC-bus voltage reaches 136 V from the holding stage to the discharging stage. For the proposed switch strategy using the compensation model, the variation of the

DC-bus voltage is reduced to 102 V during the switching process.

Does a state switch affect the power converter?

Finally, the simulations and experiments are performed to validate the performances of the switch strategy used in the FESS-UPS system, and the results prove that the current/voltage peaks during the switching process are effectively mitigated, so the impact on the power converter caused by the state switch is suppressed.
