How does Li plating affect electrochemical reversibility?

During Li plating, uniform and dense Li deposits forms, which is close contact with the current collector formed, which significantly suppressed the side reactions, and enhanced the electrochemical reversibility.

What are the principles of Li plating?

In a word, the principles of Li plating are interlinked to industrial electroplating in fact. Electroplating reagents and assisted means can be introduced into LMBs to guide and evolve dendrite-free and high-efficiency Li plating/stripping or Li metal anodes.

What is the role of electroplating reagents and assisted means in LMBS?

Electroplating reagents and assisted means can be introduced into LMBs to guide and evolve dendrite-free and high-efficiency Li plating/stripping or Li metal anodes. At the same time, mechanisms of electroplating can also provide some important explanations based on the identical electrochemical fundamentals.

Does Cu/C-Sn improve electrochemical Li plating/stripping behavior?

During the electrochemical Li plating/stripping cycling, the Cu/C-Sn electrode delivered high average Coulombic efficiency of 95.4% for 250 cycles (Fig. 4 b) at  $1 \text{ mA cm}^{-2}$  and  $1 \text{ mAh cm}^{-2}$ , showing the generality of using Sn species in improving the electrochemical Li plating/stripping behavior.

Can Cu/S-Sn foil electrode reduce active Li loss in high-energy-density LMBS?

These results indicate the great advancement of using Cu/S-Sn foil electrode to reduce active Li loss and improve the electrochemical performance in high-energy-density LMBs systems. The electro-mechanical stability of the Cu/S-Sn electrode and the related mechanism behind were further investigated using both experiment and theoretical simulation.

Do Cu/S-Zn & S-S-Al electrodes reduce Li nucleation overpotential?

Experimentally, Cu/S-Zn, Cu/S-Al and Cu/S-Sb electrodes delivered lower Li nucleation overpotential, suppressed Li dendrite formation and stable electrochemical Li plating/stripping cycling (Figs. S28 - S31).
