Toyota and Mazda have started field tests of Toyota's 'Sweep Energy Storage System' at Mazda's plant in Hiroshima. The project also uses retired Toyota EV batteries. For the tests, Mazda's main campus power supply system and Toyota's system, which uses batteries from electric vehicles, are linked.

For the tests, the power system at Mazda's headquarters campus—the only power generation system operated by an automaker in Japan—and Toyota's system that utilizes batteries from electrified vehicles will be connected through their respective energy management systems. This will enable the.

In the future, the storage system will be used to regulate power supply and demand from renewable energy, which fluctuates depending on weather and time of day, contributing to carbon neutrality. The tests are aimed to contribute to building a battery ecosystem, which is part of the seven mobility.

Tokyo, Aug. 22 (Jiji Press)--Major Japanese automakers Toyota Motor Corp. and Mazda Motor Corp. announced Thursday that they have started joint field tests of an energy storage system using Toyota's vehicle batteries. In anticipation of increased electric vehicle adoption, the move aims to spread.
