# Metering location of energy storage station

## Overview

What is behind the meter storage?

ns for Behind the Meter StorageAs discussed earlier, behind the meter (BTM) refers to the electrical system on the c nsumer side of the power meter.Energy storage solutions in BTM applications have been used for many years as a standby power s urce in the case of power loss. Historically, lead-based batteries were the battery o.

Do I need metering for NEM-small paired storage systems?

For NEM-Small paired storage systems, no additional metering on either the NEM REGF or the storage device is required. Instead, an estimation methodology will be used in lieu of metering to validate the eligible NEM credits.

Can Ngom and generating facility be interconnected behind a SCE meter?

For VNEM type projects the NGOM and generating facility must not be interconnected behind any SCE meter. These interconnections commonly utilize existing SCE service panels/meter banks to interconnect the generating facility to the grid. In this scenario please provide the following on the SLD:.

What is the maximum energy storage capacity for a regf?

For example, if the REGF is sized to load at 20 kW, then the energy storage device(s) rating can be a maximum of 30 kW (AC). Paired storage systems of this size will be referred to herein as “NEM-Large Paired Storage Systems.”.

What are the requirements for self-contained metering?

In order to use this option, the following requirements must be met: 1. Facility must have a main breaker that can be operated by the customer on the same metering switchboard (meter panel) as the revenue meter. 4 Reference SCE’s Electrical Service Requirements for information on Self-Contained Meters. 2.

Can a new NEM generating facility be connected to the SCE distribution system?

The interconnection of a new NEM generating facility to the SCE Distribution System must not degrade any of the existing SCE protection and control schemes nor lower the existing levels of safety and reliability for other customers. Over and under voltage trip functions and over and under frequency trip functions.
