Based on PCMs, photo-thermal conversion phase-change composite energy storage technology has advanced quickly in recent years and has been applied to solar collector systems, personal thermal management, battery thermal management, energy-efficient buildings and more. The future research should address:.

What is a phase change energy storage material?

2.1. Materials As a phase change energy storage material, phase change PA (OPE44, Luer new materials Co., Ltd., Hangzhou, China) has excellent latent heat capacity and phase change temperature of about 44 °C. OBC (INFUSE 9530, Dow Chemical, USA) has a density of 0.887 g/cm<sup>-3</sup> and a melt index of 5 g/10 min (190 °C/2.16 kg).

What is a phase change thermal storage system (PCM)?

PCMs are the key factors that determine the phase-change thermal storage performance of composite materials, and they should have high phase-change enthalpy and suitable phase-change temperature. The commonly used PCMs include organic waxes, inorganic salt hydrides, metals, etc.

What are high-performance composite phase change materials (PCMs)?

High-performance composite phase change materials (PCMs), as advanced energy storage materials, have been significantly developed in recent years owing to the progress in multifunctional 3D structural materials, including metallic foams, carbon foams, graphene aerogels and porous scaffolds.

Are PCM composites useful in thermal energy storage and thermal energy conversion?

The involvement of phase change materials (PCMs) in thermal energy storage (TES) and thermal energy conversion (TEC) systems is drastically growing day by day. The modern scientific revolution brings opportunities for research scholars to find various PCM composites to minimize difficulties in heat energy utilization techniques.
