Policy changes in the u s energy storage industry

Overview

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

Are policy changes threatening the storage industry?

“However, the industry stands at a crossroads, with potential policy changes threatening to disrupt this momentum.” In the near term, the report expects 15 GW/49 GWh of new storage capacity to be installed across all segments in 2025, with utility-scale installations projected to grow 22% year-over-year.

Will changes to federal policy slash future storage growth?

The five-year forecast for utility-scale storage remains solid, but looming changes to federal policy could slash future growth. If proposed changes to the Investment Tax Credit (ITC) in the House’s reconciliation bill become law, the total storage buildout over five years could fall 27% below the current base case.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

How many GW of battery storage are there in the United States?

As of 2023, there is approximately 8.8 GW of operational utility-scale battery storage in the United States. The installation of utility-scale storage in the

United States has primarily been concentrated in California and Texas due to supportive state policies and significant solar and wind capacity that the storage resources will support.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.
