Port of Spain energy storage supercapacitor

Overview

Why do we need energy storage systems in Spain?

Energy storage systems in Spain are a key element in the fight against climate change, as they help us to address the challenge of the energy transition. These systems make renewable energy production more flexible; and therefore help us to guarantee its integration into the Spanish electricity system.

What are supercapacitors & how do they work?

Supercapacitors are an alternative energy storage device to batteries. They are capable of storing large amounts of electrical energy in the form of electrostatic charges. In addition, they can be charged and discharged in a matter of seconds, thus being ideal for responding to energy peaks or brief supply interruptions.

How do supercapacitors store energy?

Like hydroelectric pumping and compressed air systems, this system is designed to store energy on a large scale. Supercapacitors are an alternative energy storage device to batteries. They are capable of storing large amounts of electrical energy in the form of electrostatic charges.

Which country has the most energy storage systems in Europe?

With more than 20,000 megawatts, Spain is the country with the largest number of energy storage systems in Europe measured by power, and has the second largest number of projects: 128 in total; second only to Germany's 169.
