Portable solar energy storage charger

Overview

What makes a good portable solar charger?

Great portable solar chargers prioritize size, weight, and packability over all else. These smaller models are designed to charge electronic devices with lower energy needs, like cell phones and smartwatches. But if you're trying to charge something that takes a lot of power, they won't work as well.

Why do you need a portable solar charger?

A dead device is deadweight when an electrical outlet is nowhere in sight, which is when a portable solar charger comes in handy. It can keep your gadgets powered up when you're enjoying life off-grid — perfect for camping, backpacking, traveling, or emergencies.

Which solar charger should I buy?

If you're seeking a super portable solar charger for the backcountry or something small, affordable, and durable for your daily life, this is worth consideration. Or, for a larger and more powerful but still portable panel, we recommend the SunJack 25W. It weighs 29.4 ounces, 17.05 more than the Nomad 5, but it has a better charging speed.

How much power does a portable solar charger use?

Efficient portable solar chargers often have power outputs of around 20W. A key appeal of these chargers is their design for on-the-go use, with compact and foldable designs being prevalent. Some chargers feature an integrated stand or hanging loops for optimal sun exposure when deployed.

Are portable solar chargers good for camping?

Portable solar chargers balance packability and charging capacity. Solar panels for camping are generally larger than portable models. They also have a higher capacity to convert sunlight into energy. The chart below shows the overall score for each model we tested.

What is a solar power charger?

There's a lot to understand about solar power chargers, but at their heart, a small solar panel consists of several photovoltaic cells grouped together to absorb some of the sun's energy and convert it into an electric charge that you can use to charge electronics.
