# **Wellington energy storage lithium battery company**

PUSUNG-R (Fit for 19 inch cabinet)

## Overview

---

SYDNEY, July 08, 2025 (GLOBE NEWSWIRE) -- Fluence Energy, Inc. ("Fluence") (NASDAQ: FLNC), a global market leader delivering intelligent energy storage, services, and asset optimization software, today announced that the company has been selected by AMPYR Australia (AMPYR) for the 300 MW / 600 MWh Wellington Stage 1 Battery Energy Storage System (BESS) in Wellington, New South Wales, Australia. Who owns the Wellington Battery energy storage system?

AMPYR Australia has announced the acquisition of Shell Energy Australia's 50% stake in the Wellington Battery Energy Storage System (BESS) in New South Wales. This acquisition makes AMPYR the sole owner of the 1,000 megawatt-hour (MWh) project.

Could a lithium-ion battery energy storage system be developed at Wellington?

RWE Renewables Australia was exploring the possibility of developing a standalone, lithium-ion Battery Energy Storage System (BESS) at Wellington in New South Wales, on a site immediately adjacent to the Wellington Town substation.

What is the Wellington Battery energy storage system (BESS)?

The Wellington Battery Energy Storage System (BESS) is planned to be developed in the central west New South Wales (NSW), Australia. The project will comprise a grid-scale BESS with a total discharge capacity of around 400MW. AMPYR Australia, a renewable energy assets developer in the country, owns 100% of the BESS project.

Where is the Wellington Battery located?

The existing Wellington substation is very strategically located within the NSW energy grid. The output from both stages of the Wellington Battery represents the demand from over 60,000 homes. This fund has been established with Dubbo Regional Council (DRC), allocating \$2 million to the local community

over the Battery's life.

How long will it take to build the Wellington Battery?

Plans for construction of Stage 2 are ongoing, but construction is likely to follow 12 to 18 months behind Stage 1. The existing Wellington substation is very strategically located within the NSW energy grid. The output from both stages of the Wellington Battery represents the demand from over 60,000 homes.

Are lithium batteries dangerous?

Filthy lithium batteries that are an extremely hazardous, toxic fire/smoke risk do not belong anywhere near Wellington because the batteries spew out extremely dangerous fumes when they burn for days! Coal, gas and uranium are far superior, plentiful, natural, Australian energy resources that provide real power.
