# Yemen energy storage

## Overview

---

With its aging grid and political instability, Yemen's energy crisis has turned energy storage batteries from luxury items to lifelines. But here's the kicker: while global lithium-ion battery prices have dropped to \$0.495/Wh in 2024 [3] [4], Yemeni buyers still face a pricing rollercoaster. Why is the energy sector important in Yemen?

The Yemeni government is committed to economic reform, hoping that it will lead to further economic stability and recovery in the upcoming future. The energy sector is one of the key elements of these improvements (The Republic of Yemen 2013). Besides, Yemen's power industry is currently witnessing the worst crisis in the nation's history.

What is the main source of energy in Yemen?

As mentioned earlier, according to the International Energy Agency, in 2000, oil made up 98.4% of the total primary energy supply in Yemen, while in 2017, oil made up about 76% of the total primary energy supply, and natural gas about 16%. Oil and gas are the largest suppliers of fuel for power plants (Sufian 2019).

What is the energy mix in Yemen?

However, Yemen's current energy mix is dominated by fossil fuels (about 99.91%), with renewable energy accounting for only about 0.009%. The national renewable energy and energy efficiency strategy, on the other hand, sets goals, including a 15% increase in renewable energy contribution to the power sector by 2025 (Fig. 11).

How does Yemen generate electricity?

Yemen will generate annual revenue from carbon trading and the sale of unused fossil fuels (such as oil and its by-products) and natural gas by relying on renewable energy to generate electricity. The total generating capacity of wind and solar energy is  $18600 + 34,286 = 52886$  MW (52.886GW).

Is there a shortage of electricity in Yemen?

Yemen is experiencing a severe shortage of several gigawatts of electricity, according to the Yemen Public Electricity Corporation (YPEC), which is a semi-independent arm of the Yemen Ministry of Electricity and Energy (YMEE) (World Bank 2009).

How much energy does Yemen use?

In 2017, oil made up about 76% of the total primary energy supply, natural gas about 16%, biofuels and waste about 3.7%, wind and solar energies etc. about 1.9%, and coal about 2.4%. According to the International Energy Agency report, the final consumption of electricity in Yemen in 2017 was 4.14 TWh.
